This listing of claims will replace all prior versions, and listings, of claims in the application:

The Status of the Claims

- 1. (Currently Amended) A method for manufacturing a MOSFET device, the method comprising:
 - (a) selectively forming a shallow trench isolation in a substrate;
- (b) forming a first oxide layer on a surface of an active region of the substrate and implanting ions thereinto for forming a low doped drain in the active region <u>prior to the</u>

 formation of a gate;
 - (c) forming a <u>first</u> nitride layer;
- (d) removing a part of the <u>first</u> nitride layer and the oxide layer where <u>athe</u> gate will be located and etching the substrate corresponding to the part by a predetermined depth;
 - (e) forming a second oxide layer over an exposed portion of the substrate;
 - (f) implanting ions into the substrate;
 - (g) removing the second oxide layer;
 - (h) depositing a gate insulating layer and a polysilicon layer;
 - (i) polishing until the <u>first</u> nitride layer is exposed;
- (j) removing the <u>first</u> nitride layer, depositing an oxide layer conformally and depositing an <u>second</u> nitride layer;
 - (k) etching the <u>second</u> nitride layer to form a gate sidewall of nitride;
- (l) implanting ions into the substrate to form a source and drain at both sides of the gate; and
 - (m) removing an exposed oxide layer.

- 2. (Original) A method as defined by claim 1, wherein the substrate comprises a silicon substrate.
- 3. (Original) A method as defined by claim 1, wherein the shallow trench isolation comprises an oxide layer.
- 4. (Original) A method as defined by claim 1, wherein the predetermined depth is in range of about 200 to about 1000 angstroms.
- 5. (Original) A method as defined by claim 1, wherein the exposed substrate is oxidized at about 600 to about 800 °C to form the second oxide layer having a thickness of about 100 angstroms in (e).
- 6. (Original) A method as defined by claim 1, wherein a chemical mechanical polishing is performed in (i).
- 7. (Currently Amended) A method as defined by claim 1, wherein the second nitride layer is removed by an etch back processing in (k).
